

Maxforce® Complete Solution Sheet

Maxforce® Complete delivers reliable, broad-spectrum insect control with the versatility professionals need outdoors. Powered by 1% hydramethylnon, its delayed-action “Domino Effect®” ensures foraging insects carry the bait back to the colony – wiping out the source, not just the ones you see. A multitude of uses and rates makes it ideal to be used on preventive and curative accounts.

Why Pros Choose Maxforce Complete Outdoors

• Use It Nearly Anywhere Outside

Apply around structures, lawns, and along perimeters, fence lines, utilities, crack and crevices where insects may enter, and landscape features. Bait stations can extend the life of bait applications.

• Highly Palatable to Many Pests

Multiple sized particles, AI completely incorporated, Protein/Fats/Carbohydrates food spectrum, attractive to many pests, not just ants.

Effective on nuisance ants including ants like odorous house ants, carpenter ants, Argentine ants, cockroaches (German, America, Oriental, Smokey Brown), silverfish, earwigs, and crickets.

Fastest Facts

- Proven efficacy
- All macronutrients, highly palatable
- Broad label, indoor/outdoor uses
- Various container sizes, easy to apply
- Effective even when wetted

Versatile Containers

- 8 oz., 4 lb. & 25 lb. sizes
- **8 oz. & 4 lb. are calibrated reusable service containers**
- Shaker or spreader useable
- 4 lb. jug treats up to 32 homes

Even small amounts go a long way.
Early treatment often prevents future call backs.

Flexible Application for Any Situation

- Perimeter banding: Apply a 1–2 ft. band around structures at 0.5 oz. per 25 linear ft.
- Broadcast applications: Apply 1 oz. per 1,800 sq. ft. (1.5 lb./A)
- Mound treatments: ~1 oz. sprinkled around mound edges
- Refillable stations: 1–3 oz. per station, spaced every 20–30 ft.

Ideal for Scheduled Services Even Under Precipitation

In a comparative evaluation of Maxforce Complete and a competitive borate bait, both were **exposed to 0.25” and 1.0” natural rain**. After drying for 48 hours, they were evaluated visually and then offered to crickets for efficacy. While the competitive borate bait did not look structurally different it, at best, it provided **no more than 30% control**. **Maxforce Complete provided 100% control at 0.25” and 90% control at 1.0” rain**. Additionally, when offered to Red Imported Fire ants (RIFA), the **Maxforce Complete was readily accepted and the competitive borate bait was not**. Even when Maxforce Complete gets wet and dries out, it works better than the competitive borate bait. **Maxforce Complete is better after being wetted, more efficacious, and with a smaller (and calibrated) service container.** (Envu Study/Protocol 24MMIUSAD0)

Maxforce® Complete
Total Flexibility. Proven Performance. Outdoor Confidence.
