

About Marengo[®] G

What is Marengo G?

Marengo G is a granular, selective, preemergence herbicide, that controls many annual grasses, broadleaves and sedges, providing long lasting control. Marengo G is labeled for use on over 250 nursery plants.

What are the key features of Marengo G?

Marengo G offers up to 8 months of residual control. It controls a wide range of weeds, while offering excellent plant safety. Plus, Marengo G uses Verge[®] carrier to provide uniform particle distribution with virtually dust-free application.

What are the key benefits of Marengo G?

The longevity of Marengo G reduces labor with fewer preemergence applications and less time making clean up applications. Marengo G controls some of the most difficult weeds, including eclipta, bittercress, groundsel, oxalis, marestail, spurge, crabgrass and annual bluegrass. Fall applications offer continuous weed control into the following spring season.

What is the active ingredient?

The active ingredient in Marengo G is indaziflam, which has a unique mode of action and is the only active ingredient in the Weed Science Society of America (WSSA) Group 29.

What is the mode of action?

Indaziflam's unique mode of action inhibits root development during germination by blocking cellulose biosynthesis.

How is the Marengo G carrier different than granular carriers?

Marengo G uses Verge as its carrier. Each particle is similar in size and shape allowing for uniform distribution during application. Verge is virtually dust-free.

How To Use Marengo[®] G

What weeds does Marengo G control?

Marengo G offers broad-spectrum control of over 70 broadleaf, grassy and sedge weeds.

Can I use Marengo G on a wide variety of plants?

Yes, Marengo G is labeled for use on over 250 ornamental plants.

Where can Marengo G be applied?

Marengo G can be applied in production nurseries including field-grown and container ornamentals, non-bearing fruit and nut trees, ornamental production facilities (such as shadehouses, lathhouses and hoopouses) and hardscapes.

What is the re-entry interval (REI) when using Marengo G?

The REI for Marengo G is 12 hours post-application.

What personal protective equipment (PPE) is required when using Marengo G?

Long-sleeved shirt, long pants and shoes plus socks are required.

How Marengo G Works

How quickly does it work?

Marengo G will begin to work once it has been activated by rainfall or irrigation.

How long will the effects last?

Marengo G can last for up to 8 months, depending upon environmental conditions and timing of application.

Do I need to rotate Marengo G with other preemergence herbicides?

As part of best management practices and resistance management, it is recommended to rotate Marengo G with other classes of chemistry, such as Ronstar® G.

How does Marengo G fit into a weed management program?

Marengo G is the longest-lasting nursery herbicide that provides broad-spectrum weed control, including control of some of the toughest nursery weeds. Marengo G can be applied to a wide range of ornamentals with the convenience of an outstanding carrier.
